Foundational Open Source Examples

Node.js - NearForm is one the largest contributors globally

Fastify - The fastest Node.js web framework, created in NearForm

HTTP/3 & QUIC - NearForm led the development on Node.js. Critical for CDNs and edge networks

GraphQL Hooks - Lightweight GraphQL client for React, created in NearForm

Piscina - Node.js Worker Thread Pool handling, created in NearForm

MQTT.js - All major Cloud vendors' IoT SDKs are built on this. Created in NearForm.

Aedes - The leading Node.js IoT MQTT broker, created in NearForm

Undici - The new http client for Node.js, created in NearForm

IOT, ML and Wearables

Bluetooth

The first low-power Open Source JavaScript-programmable Bluetooth digital conference badge.

Azure IoT

The first low-power Open Source programmable Bluetooth digital conference badge to interact with Microsoft Azure using MQTT.

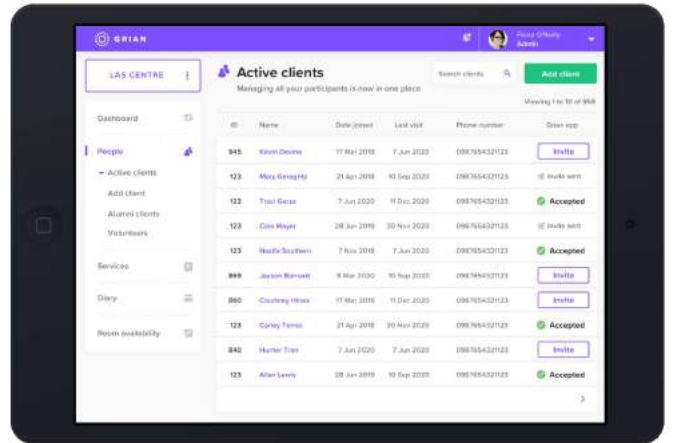

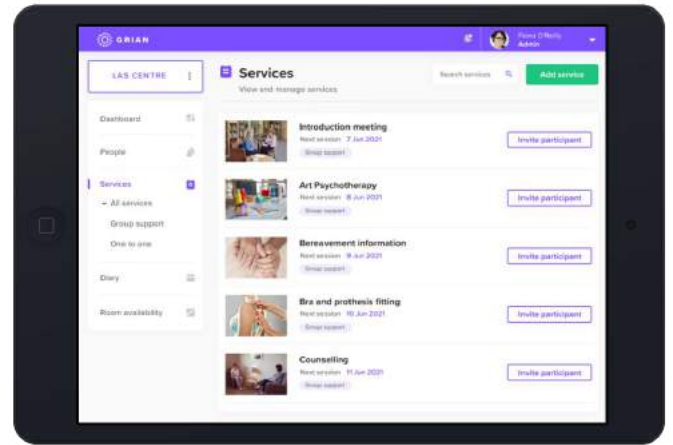

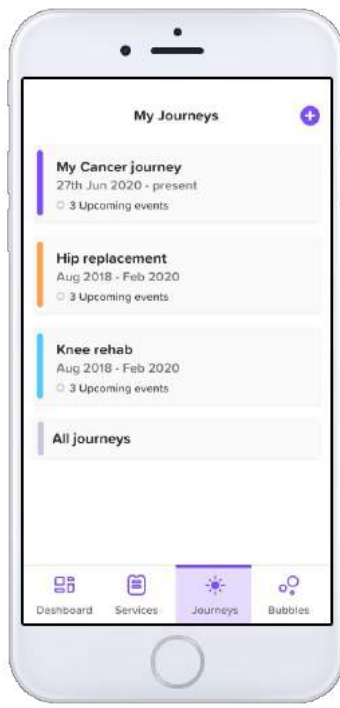

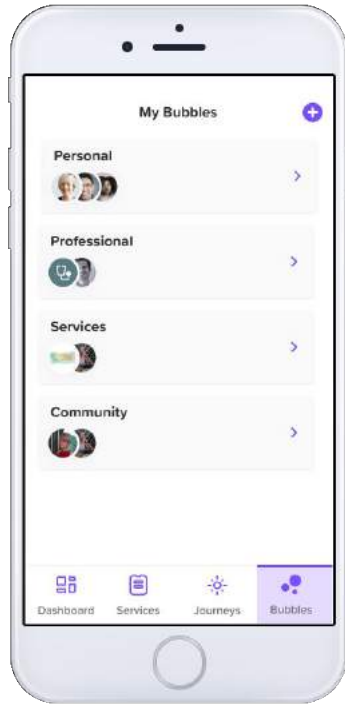

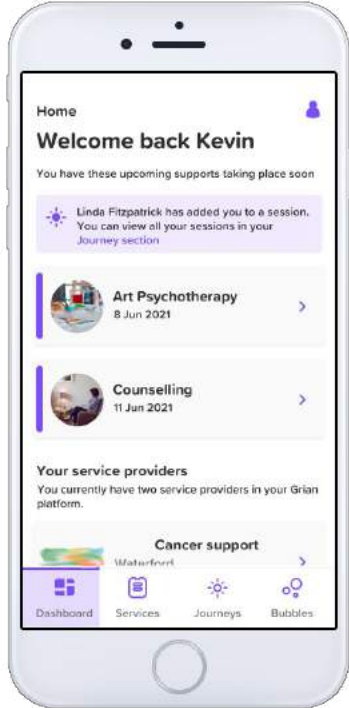

Machine Learning

Bangle.js was the first low-power programmable Bluetooth/GPS smartwatch to run TensorFlow-Lite Machine Learning.

Patient Journeys

04 Outcomes

Accelerated project delivery and improved remote patient outcomes.

02 Journeys

Custom patient-optimised journeys with patient-centric community bubbles and engagement.

03 Integrations

Other solutions easily integrated using Open Source and open APIs on a secure scalable foundation.

01 Stakeholders

Self-management from patients to healthcare professionals and administrators to technology providers.

DIGITAL HEALTH

Patient Engagement Backbone
